

Computer-Assisted Coding, CDI, Auditing Solutions

Computer-Assisted Coding & Clinical Documentation Solutions

The Fusion Suite™

DOLBEY
— SINCE 1914 —

Fusion CAC – More than just Computer-Assisted Coding

Not all computer-assisted coding is made equally. Dolbey's team of top industry experts work with you every step of the way to deliver results.

Fusion CAC™ enhances collaboration and improves the processes of coding and CDI by automating code suggestions while also prioritizing charts. Fusion CAC presents the coding, CDI and auditing teams with a list of preselected codes for verification, producing a faster process with more consistent results.

Fusion CAC can code all patient types, including hospital and profee, from a single platform. The AI/ML engine at the core of Fusion CAC is designed to code charts using the ICD-10-CM/PCS and CPT code sets. Coders can realize productivity increases of 25% or more. As best practices change

and regulatory codes update, Fusion CAC is tuned to adapt to maintain a highly accurate outcome.

Fusion CAC enhances the entire process as soon as documentation starts. Identifying problems while the patient is still in-house, providing better, more thorough documentation, enabling coders and CDIS to complete work in less time with more accuracy.

Dolbey was an early pioneer in CAC with implementations producing tangible results in facilities ranging in size from community hospitals to large, multi-site health systems. This combination of experience and innovation places you on the fast track towards capturing the advantage from the technology that is transforming medical coding.

Fusion CAC enhances the entire coding and CDI experience with sophisticated technology that has evolved into a powerful collaboration tool, delivering measurable benefits to several teams within the revenue cycle ecosystem.

Benefits and Features

Having successfully implemented and proven the results of computer-assisted coding, Dolbey is ready to introduce you to the next generation of benefits from CAC. Our innovative customers have added ideas and new functionality. Fusion CAC has proven potential to dramatically enhance the coding, CDI and auditing workflow by providing a more standardized and streamlined process, enabling users to work smarter not harder.

Collaboration Space for CDI, Coding and Auditing

Chart Prioritization with Evidence Transparency

Single Engine for Hospital and Professional Coding

Quality Initiative Identification

Advanced Engine Built on ML and AI Technology

Robust Dashboards & Reporting

Inpatient and Outpatient CDI

Autonomous Coding

Suggests Codes on "Day One"

Denial Management Tracker

Full Audit Workspace

Query Platform

Flexible Workflow from Start to Finish

Documentation Improvement

As soon as documents are put into a patient chart, Fusion CAC begins reviewing the chart and suggesting codes. CDI work is prioritized to guide your staff to the patient accounts that need their attention.

Query providers and append chart notes, all within one solution, providing improved visibility for all team members.

Prioritization & Transparency

Advance your CDI program by using Fusion CAC with CDI Alerts™ to pinpoint query opportunities in a prioritized worklist for your CDI team.

Fusion CAC leverages a proprietary engine technology to do the heavy lifting of reading through the patient chart in advance, to spotlight charts with the highest potential for impact.

Coding Productivity

At the heart of Fusion CAC, coders immediately benefit from comprehensive CDI collaboration tools and expert code suggestions on day one.

This enhances efficiency by streamlining coding processes and ensuring accuracy in code assignment, leading to improved quality scores and a better case mix.

The Fusion CAC solution works for you while the patient is still receiving care and continues working for you after final coding.

Autonomous Coding

Leverage the advantage of Fusion CAC's cutting-edge autonomous coding capability which allows you to seamlessly send outpatient accounts straight to billing with an exceptional accuracy rate of 100%.

On average, Fusion CAC customers autonomously code more than 10,000 charts per month.

Quality Auditing

Meeting productivity levels is an important goal, but achieving accuracy is an absolute requirement. Fusion CAC makes quality auditing easier than ever before.

Create audit work queues based on your own custom criteria. Fusion CAC presents coded events with queries, notes, codes and documents for easy review.

Dashboard & Analytics

Fusion CAC offers robust analytic tools, designed to provide a detailed picture of your data. This comprehensive overview ensures that you are equipped with the necessary insights to make well-informed decisions confidently.

Executive dashboards, canned reports and ad hoc reporting allow you to customize your needs easily.

Available Encoder & Research Tools

One solution for everything your coders and CDI staff need. The available integrated encoder provides research, coding clinics, edits, groupers and more!

Now, the most experienced computer-assisted coding solution has an optional built-in encoder; everything you need in one single solution for coding and CDI.

This optional feature allows you to replace or use your existing encoder; however, the value of the encoder has quickly changed with the advent of CAC. Coders don't start with blank screens; they start with suggested codes that link into the chart documentation.

Fusion CACe™ takes this experience to the next level. Now, as coders validate the results of the CAC solution, they have

real-time exposure to edits and reference material to better determine the best code selection.

Fusion CACe offers a signature Research Pane, providing coders with reference material at their fingertips, further refining the coding process. This powerful tool is updated monthly to deliver the most up-to-date information for confidence in coding. Designed as a constant source of reference support, without interfering in the coding process, the Research Pane provides as much or as little assistance as your coders require.

Sophisticated Reporting

For many, the process of coding incorporates several systems. This leaves coding leadership with very few automated reporting tools.

With Fusion CAC, you can report on nearly every event that occurs in your coding process. This new, innovative approach to outcome analysis can lead to smarter managerial decisions regarding staff, workflow, physician documentation and revenue.

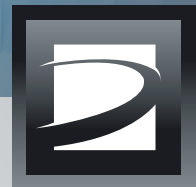

The Dashboard gives you an at-a-glance view of your backlog, completed charts

and billed charts in real time. For multi-site organizations, view data from the top or focus on the detail of one hospital or one group of users. Review statistics of expected revenue daily as well as inpatient and outpatient discharges. Drill down by day, by coder or by patient account to review the history of coding events and the system's performance.

Since 1914, Dolby has been providing voice recording and document management solutions designed to help healthcare organizations improve workflow, boost productivity and increase profitability.

The Fusion Suite platform is Dolby's line of award-winning software products that includes dictation, transcription, speech recognition, clinical documentation improvement and computer-assisted coding technologies. Together they deliver an end-to-end solution which creates more accurate reporting of critical data elements and improves documentation, reimbursement and patient care.
